Week 08 Progress Report

Details

- **Name of Student:** Tirthak Girish Likhar
- **PRN: 22070521041**
- **Name of Industry:** SS Infotech Pvt. Ltd.
- **Reporting Week: (23/02/2026 to 27/02/2026)**
- **Institute Mentor Name:** Dr. Shreyas Hole
- **Industry Mentor Name:** Mr. Viraj Patle

Overview of a Week

- During During Week 8, my industry mentor assigned me a lighter workload because I was travelling to attend the **Nullcon Goa Cybersecurity Conference**, one of India's leading security events. Instead of heavy configuration tasks, the focus for this week was on strengthening theoretical knowledge related to SOC operations and log analysis.

- I continued my learning through relevant **TryHackMe modules**, especially those related to Windows event logs, SIEM concepts, MITRE ATT&CK, and basic detection engineering. This theoretical work helped me understand the underlying concepts behind the Wazuh setup that I completed in Week 7, where the Wazuh server and Windows agent were successfully installed and logs were being collected from Event Viewer.

- Along with the TryHackMe learning, I also explored **Wazuh documentation** to understand how alerts are generated, how rule evaluation works, and how Windows logs are parsed inside the SIEM. Attending Nullcon provided valuable exposure to real-world security challenges and SOC workflows used in the industry.

Key Accomplishments

- Deployed Attended **Nullcon Goa Cybersecurity Conference**, gaining exposure to modern security practices, SOC operations, and real-world attack demonstrations.
- Completed theory-based SOC learning on TryHackMe including:
  - Windows Event Logs
  - SIEM Fundamentals

- Log Analysis Concepts
- Basic MITRE ATT&CK Techniques
- Reviewed Wazuh documentation to understand:
- How Wazuh ingests Windows Event Viewer logs
- How rules trigger alerts
- How decoders interpret log fields

- Connected the knowledge gained from conference sessions and learning modules with last week's Wazuh server configuration.
- Strengthened understanding of detection workflows, alert correlation, and incident investigation concepts.

Tools Used – Week 8

- **TryHackMe – For SOC theory modules and hands-on learning labs**
- **Web Browser (Chrome/Firefox) – Used to access Wazuh documentation and Nullcon conference sessions**
- **Wazuh Documentation Portal – For studying rule processing, log ingestion pipeline, and decoder structure**
- **Notes App / Documentation File – For writing observations and understanding key SOC concepts**
- **Event Viewer (Windows Agent) – Reviewed examples of log types to relate them with SIEM ingestion**

Conclusion of Week 6 :-

Week 8 served as an important transition point in my project. Although this week involved lighter work due to my travel for the **Nullcon Goa Cybersecurity Conference**, it allowed me to strengthen my theoretical understanding of SOC operations, SIEM concepts, and log analysis techniques. The exposure gained from Nullcon and the TryHackMe modules helped me connect real-world SOC practices with the Wazuh setup I completed in Week 7.

Overall, this week reinforced the foundational concepts required for the upcoming hands-on attack simulation and incident analysis tasks planned for Week 9 and beyond.

Training Batch 2
2nd-4th March 2026
02 DAYS 07 HOURS 33 MINS 34 SECS

Network Fundamentals

Learn the core concepts of how computers communicate with each other and types of network weaknesses.

What is Networking?

Begin learning the fundamentals of computer networking in this bite-sized and interactive module.

Intro to LAN

Learn about some of the technologies and designs that power private networks

OSI Model

Learn about the fundamental networking framework that determines the various stages in which data is handled across a network

Packets & Frames

Understand how data is divided into smaller pieces and transmitted across a network to another device.

Extending Your Network

Learn about some of the technologies used to extend networks out onto the Internet and the motivations for this.

How The Web Works

To become a better hacker it's vital to understand the underlying functions of the world wide web and what makes it work.

DNS in Detail

Learn how DNS works and how it helps you access internet services.

HTTP in Detail

Learn about how you request content from a web server using the HTTP protocol

How Websites Work

To exploit a website, you first need to know how they are created.

Putting it all together

Learn how all the individual components of the web work together to bring you access to your favourite web sites.
